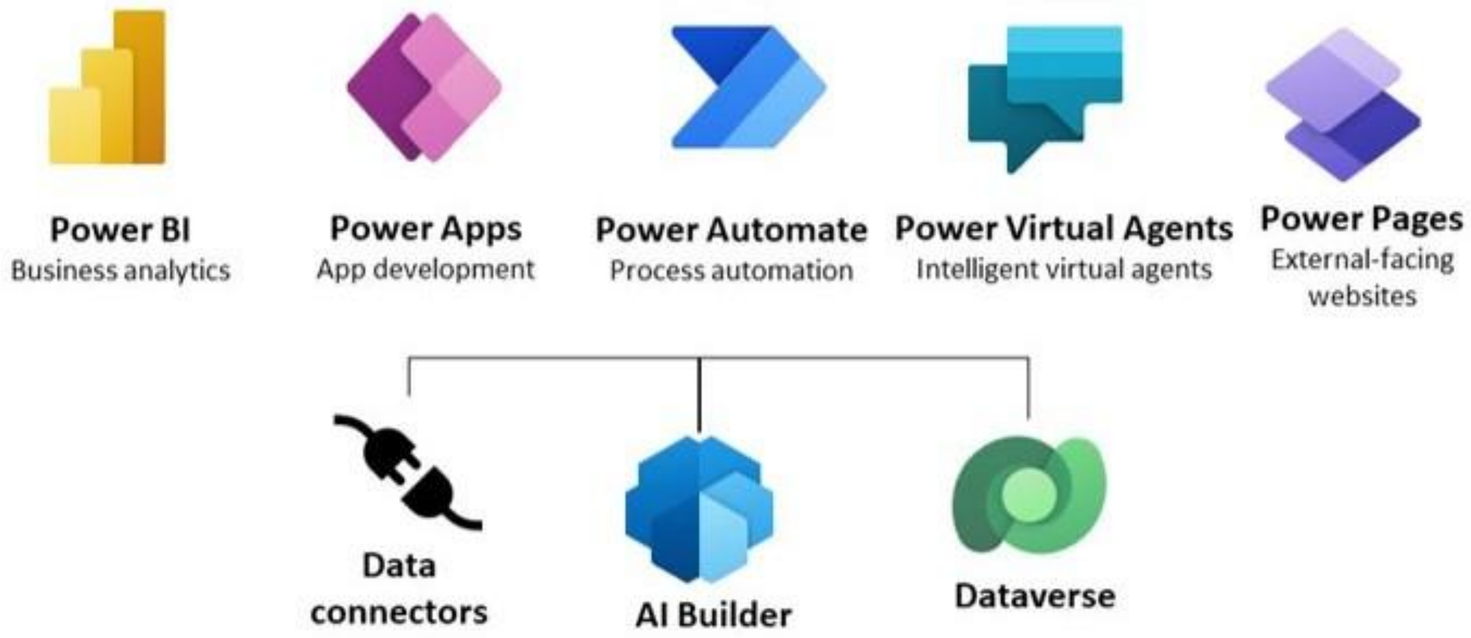
Power Platform

Power Platform overview

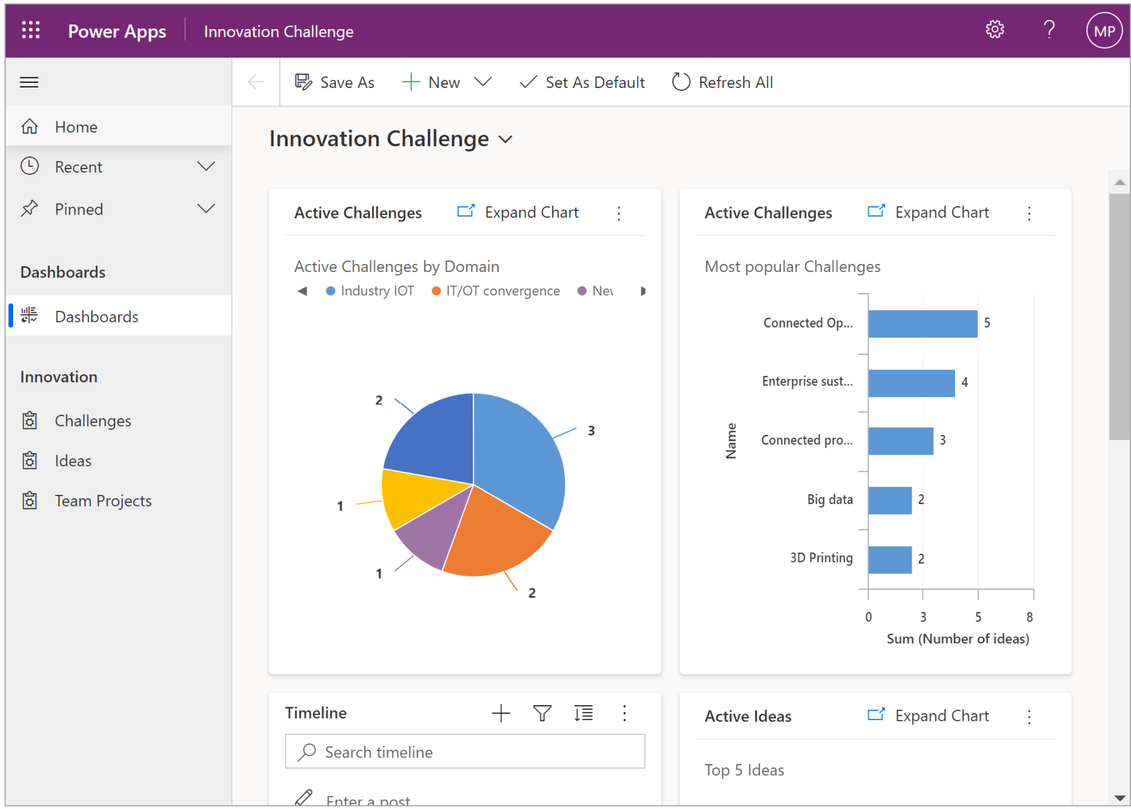
- Build the apps, dashboards and workflows you want quickly and easily without having to write any code.
- Can be easily connected to your data with hundreds of connectors for several popular cloud services and your on-premises data.
- Publish your app, dashboard or workflow within minutes to the web or any mobile operating system.

Power Platform



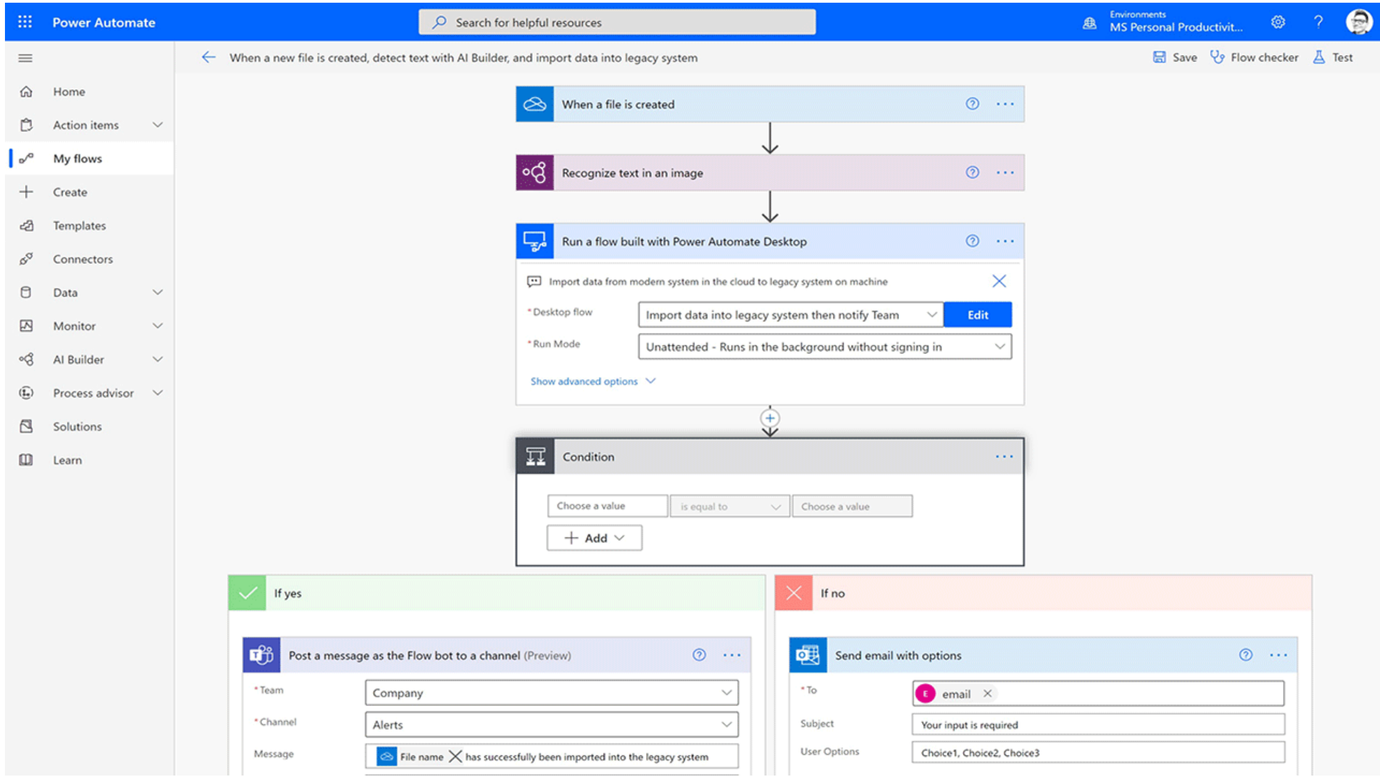
Microsoft Power Apps

- Serve Apps via mobile, web browser or teams
- Range of templates to choose from
- Two main types of Power App:
  - Model driven – data model first
  - Canvas apps – blank drag and drop canvas



Power Automate

- Power Automate allows you to create workflows that automate tasks between Microsoft services or other third-party applications.
- Streamline repetitive tasks
- Securely work with data
- Save time with Robotic Process Automation (RPA)



Identifying a good use case

- Analyse your processes to build a good case, is your process:
- Carried out multiple times per day, by multiple people
- Involve data entry, capture or copying
- Using spreadsheets, paper or clunky systems
- Used by people on the go

bridgeall

Examples

Link Housing

Risk Assessment Solution

The Link Group needed a solution to manage the creation and lifecycle of Risk Assessments across all of their offices, sites and events.

Risk assessments were being created manually and discussed at periodic physical meetings.

Wheatley Group

Clerk of Works

The Wheatley Group employ a number of Clerk of Works who inspect new build properties and ensure that they meet the specifications that have been given to the developer.

This process was previously very manual, and we are currently working with the Wheatley Group to help them automate this process.

Scotland’s Housing Network

Challenge

Scotland's Housing Network work right across the housing sector with members all over the country. Dealing with the volume of information was proving difficult to manage with spreadsheets and maintaining the latest data.
